

Triangulate evidence. Compare with Swiss reality. Recommend action.

We automatically find emerging retail opportunities, validate them against local assortment gaps, and output TEST, CONTACT, RESEARCH, MONITOR or REJECT.

PROBLEM

The real challenge is not trend discovery.

It is turning weak, fragmented signals into a local buying decision.

Our method: triangulate the evidence.

At least three signal types must agree before we recommend a test.

The product does the discovery.

The user starts a run. Hijacking creates the opportunities automatically.

The output is a decision, not a trend list.

Each opportunity receives evidence status, Swiss coverage, confidence and one action.

#	Opportunity	Triangulation	Swiss gap	Confidence	Action	Why
1	Tick-protection hiking clothing	Complete	Medium	Medium	RESEARCH	supplier + regulation missing
2	UPF alpine clothing	Complete	Low	High	MONITOR	Swiss coverage already strong
3	Urban city-camping products	Partial	High	Low	REJECT	weak Swiss use case

A global signal is not enough. Hijacking only recommends TEST when the evidence pack and Swiss gap are strong enough.

CLOSE

Why this is a strong hackathon submission.

One live capability, clear evidence trail, reusable decision logic.

Signal detection

finds repeated product patterns, not just keywords

Evidence quality

source URLs, snapshots, independence and limitations

Transferability

Swiss climate, geography, regulation and assortment fit

Actionability

TEST / CONTACT / RESEARCH / MONITOR / REJECT

Reusability

swap source set, market profile and competitor list

Final line

Triangulate. Compare. Act.
